

# ProPresenter

## Infrared Remote Control USB Version

Compatible with Windows '98 and higher, ALSO with MAC 8.0+ and higher.

Convenience and simplicity are at the heart of ProPresenter, the ultra slim, easy-to-use infrared remote control from Raymar Information Technology, Inc., now available in USB.

With just two user-friendly buttons for forward and reverse, the ProPresenter™ is one of Raymar's most popular products. Thousands of public speakers, educators, trainers, computer users, multimedia managers, display booth operators, and information technology professionals use Raymar's ProPresenter every day.

Depend on Raymar's ProPresenter to give your next speech, lecture, or presentation the superior, high-tech advantage it deserves. When you want the world's best remote control, use the ProPresenter.

With only two buttons, Raymar's ProPresenter is one of the world's most popular and easiest to use remote controls, now available in a USB version.

*Convenience  
and simplicity are  
at the heart of  
every ProPresenter,  
one of the world's  
easiest to use  
remote controls.*

## Product Description

ProPresenter's thin, credit card size is easy to hold and fits neatly in the palm of your hand. Its trim profile also lets ProPresenter store easily in a shirt or coat pocket. The compact, efficient design makes ProPresenter a perfect match for today's "road warriors" and their laptop computers.

Best of all, ProPresenter comes fully plug-and-play ready. Simply plug the IR receiver into your computer's USB port and ProPresenter is ready to glide you through your next presentation.

ProPresenter is fully compatible with all LCD display panels, monitors, and video projectors as well as virtually all software, and it can operate your equipment from 30 feet away.

Raymar has also improved the electronic IR carrier frequency for ProPresenter so that control of your important presentation will not be disrupted by the new generation of overhead fluorescent lights that are being installed nationwide.

The ProPresenter system comes complete with everything you need, including the remote control, and IR receiver with USB plug, and improved IR carrier frequency, lithium battery, instruction guide, and even a zippered carrying case.

Plus, each remote control comes with ProShow, a **free** "must-have" software program that easily customizes your computer-generated presentation.
